

Archaeology

- Image is dig site
- Clicking clears area
- Dinosaur bones waiting underneath in different spots
- Cursor is brush

Human Advancement

- Image is historical city
- Slider at edge of screen
- pull to replace old city with a modern one and show human advancement
 - I like this idea, but unsure how to make slider concept work

Planets

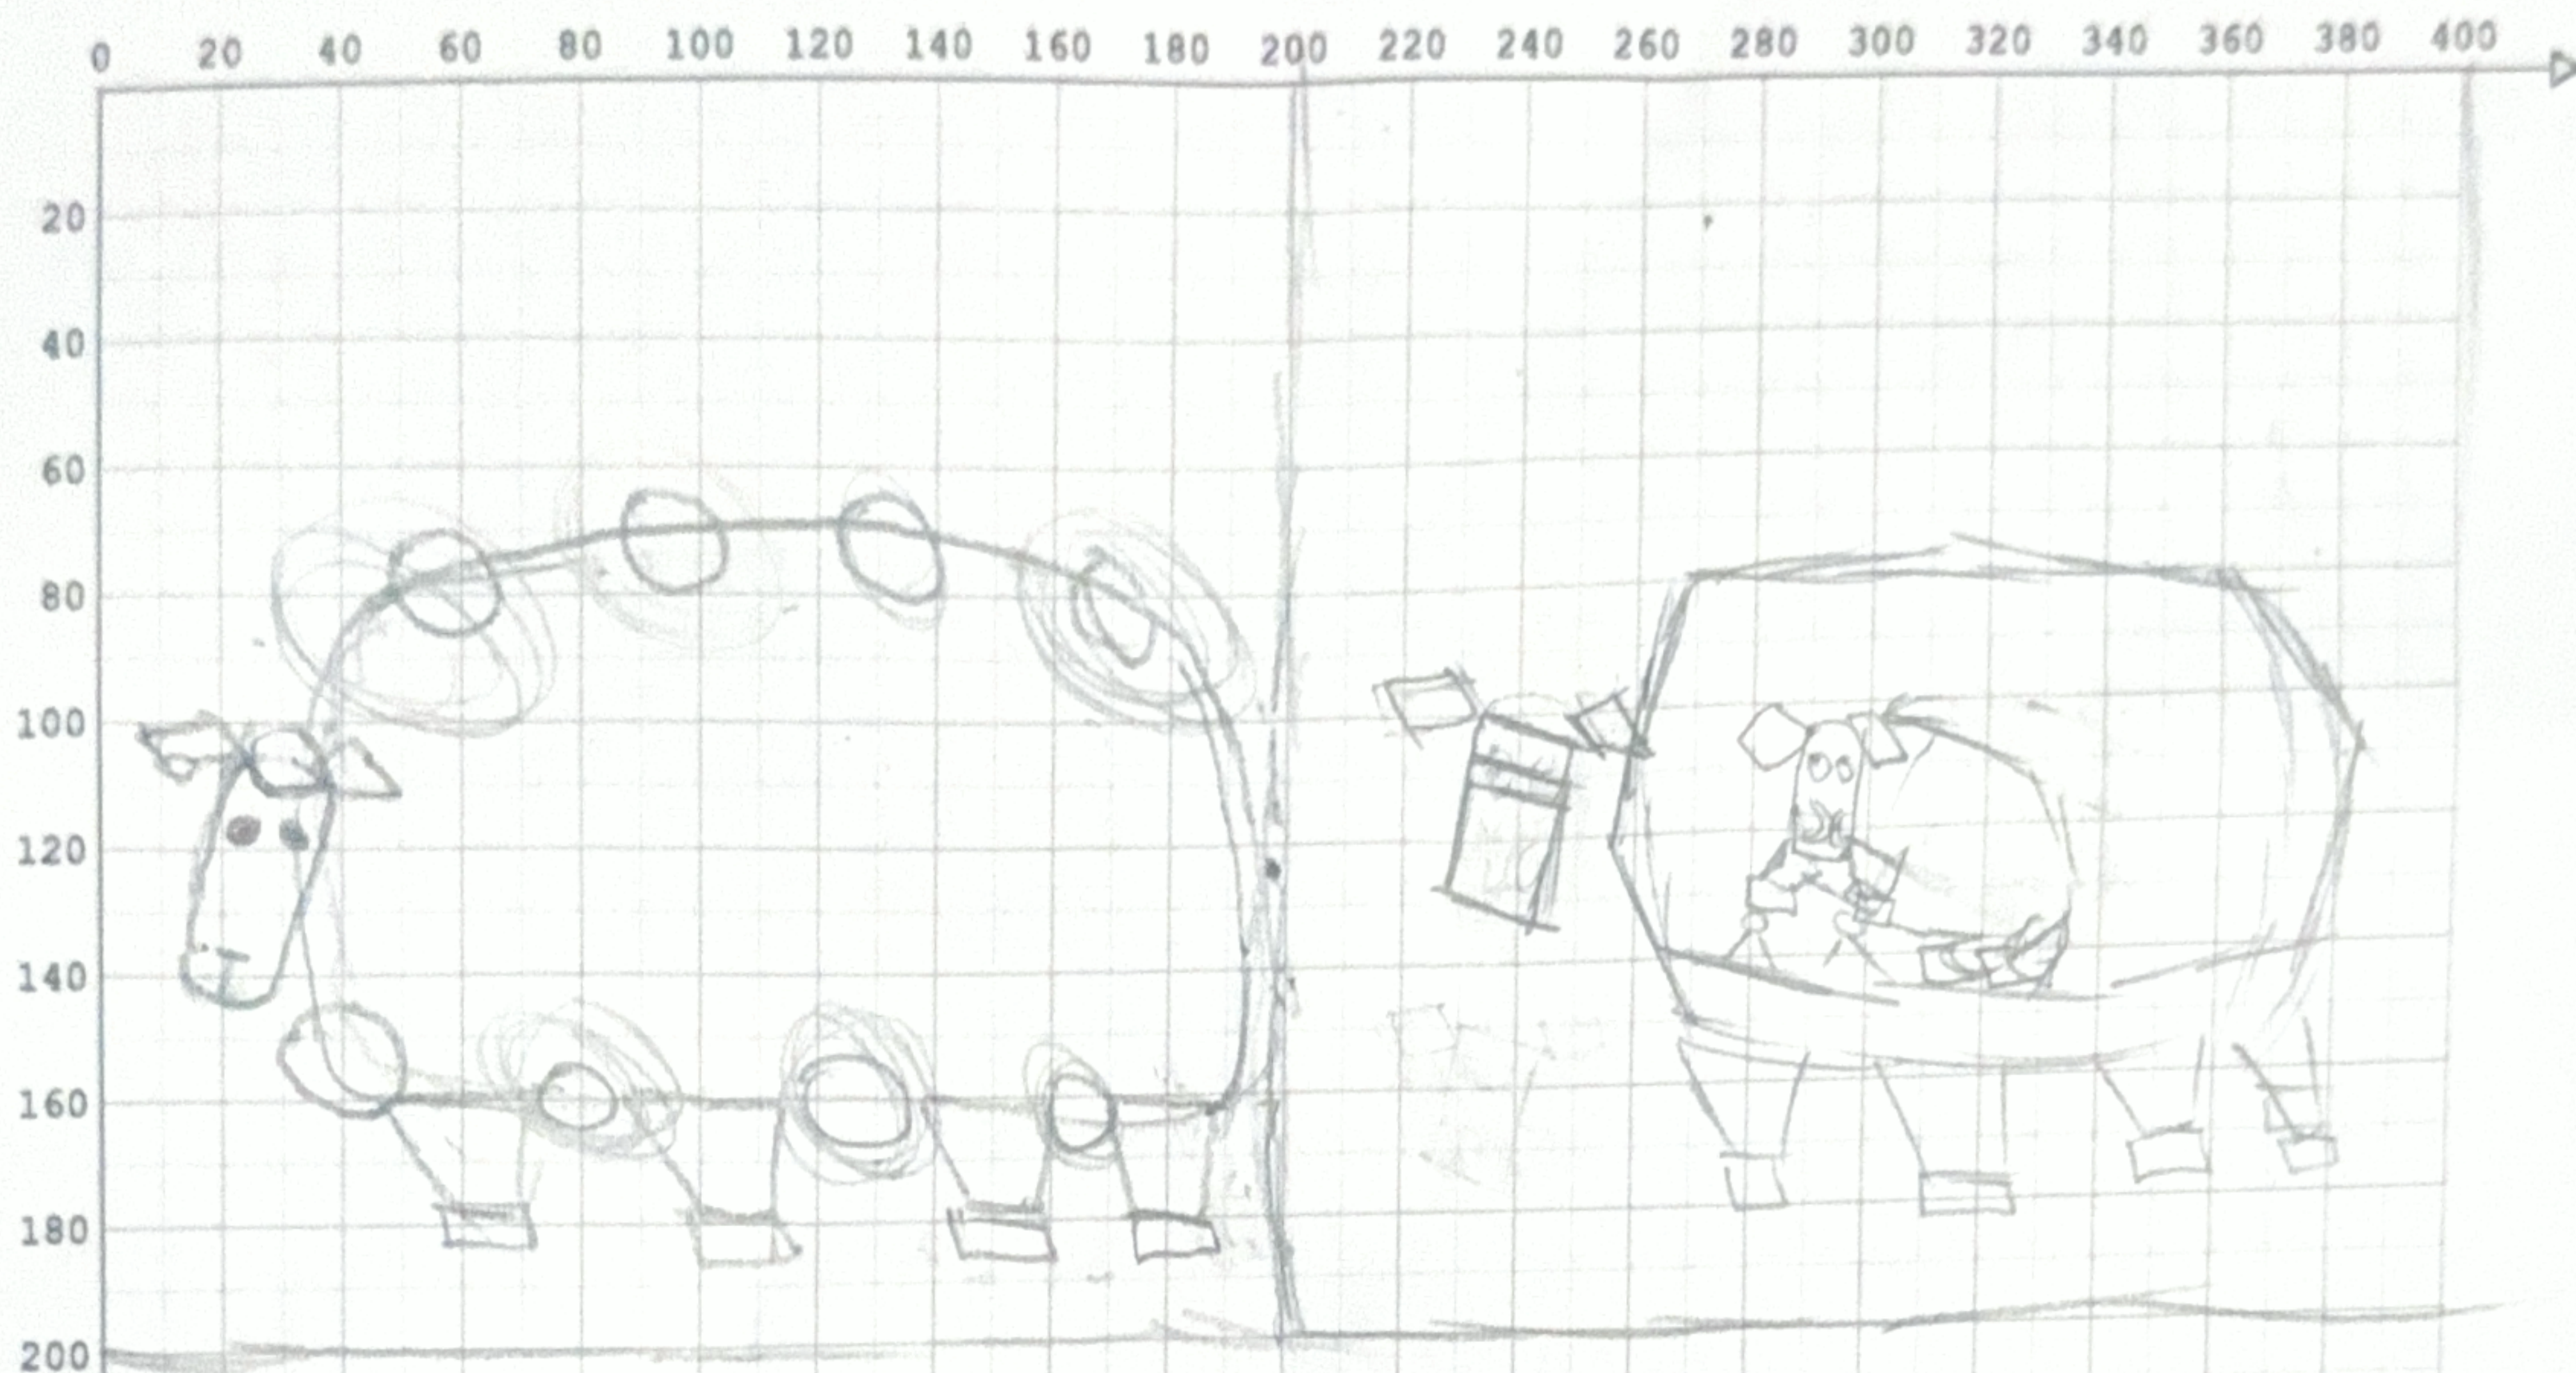

- Image is the sky at night
- All solar system planets are visible
- Clicking puts their name next to them

• Too simple? Also a bit derivative of the constellation example

Assignment Ideas

- Background is an outdoor environment with animals
 - o Farm or zoo X
- Clicking animals changes them in some way
 - Spin and flip to "dance"? X
 - Move along screen? X
 - "X-ray"? explore
- Clicking screen activates xray and shows skeletons of animals
 - o Way to make more interactive?
 - o Cursor control? explore
- Cursor controls an x-ray screen which shows small x-ray cutouts
 - o Rewards "exploration" of image
 - o Can't see full animal at once
- Add comic elements
 - o Hidden animals (hid behind cloud, something underground, etc.)
 - o Animals have weird x-rays (cow has milk carton inside, chickens are robots)

Sheep Concept

Normal

- Oval legs (white)
- Rectangle hooves (black)
- Giant pill body (white)
- Tuft of hair (white)
- Circles at edges of body to make woolen coat
- circle eyes (both black)
- line mouth (black)
- Pill head (black)
- Rectangle ears (black)

Different sizes on top

X-ray

- All made of sheer lines (white)
- Joke: No fur visible, sheep is being piloted by a smaller sheep
- Nasal cavities, two eclipse shapes
- empty eye sockets
- Larger sheep is robotic instead of skeletal

Pixel Paper - 400 x 400
Graph Paper for Screen Coordinates

No animal will be larger than 200 x 200
